

# **29-story high-rise building communication base station inverter grid connection**

## Overview

---

### Performance Description of the Totally Integrated Power

What is coordinated in modern high-rise building planning?

In modern planning, the demands on a high-rise building are not simply split up among the individual installations, but have to be coordinated. An optimum solution is created from the networking of the individual requirements.

What are the main installations of a high-rise building?

The main installations are, for example, heating, ventilation, air conditioning and refrigeration, fire protection, protection against burglary, building control system and power distribution. In modern planning, the demands on a high-rise building are not simply split up among the individual installations but have to be coordinated.

What is the Application Manual for a high-rise building?

This application manual provides an overview of the installations important for the electrical power distribution in a high-rise building. It describes the basic and preliminary planning of the power distribution and integrates planning requirements for an energy management system.

What are some examples of main installations in a high-rise building?

The main installations in a high-rise building include heating, ventilation, air conditioning and refrigeration, fire protection, protection against burglary, building control system and power distribution. In modern planning, the demands on a high-rise building are not simply split up among the individual installations, but have to be coordinated.

What are the main components of a high-rise building?

The main installations in a high-rise building include heating, ventilation, air conditioning and refrigeration, fire protection, protection against burglary, building control system and power distribution. In modern planning, these demands have to be coordinated.

What is power distribution in a high-rise building?

Tab. 3/9: Power distribution in the high-rise building. Particularly on the upper floors, the façade of a high-rise building provides a suitable surface for the energy use of photovoltaic (PV) systems. The photovoltaic modules can also be used to protect the façade, for soundproofing, thermal insulation and can be incorporated in the façade design.

## 29-story high-rise building communication base station inverter grid
