

Australian hollow photovoltaic panel manufacturer

Overview

Currently, Tindo Solar and MSquare Energy are the only companies that claim to manufacture solar panels in Australia. Tindo Solar makes its panels at a manufacturing plant in Mawson Lakes, South Australia, and has been in business since 2011. Where can I buy Australian made solar panels?

At Solar Hybrids we value quality equipment and supporting local businesses and therefore recommend Australian Made wherever we can. Tindo Solar designs and manufactures technologically advanced solar panels right here in Australia, for Australia and the world.

Are Australian-made solar panels worth it?

Currently, there are only two Australian-made solar panel brands – Tindo Solar and MSquare Energy. Only 1% of solar panels installed in Australia are designed and manufactured locally. Australian-made solar panels are worth it if you prioritise the brand's location and growth of the local economy over their cost premiums.

Why should Australians buy solar panels?

Supporting Australian-owned and operated businesses provides jobs to Australians and contributes positively to the economy. With the federal government committing \$1 billion to the domestic manufacturing of solar panels, buying locally-made solar panels would kickstart the growth of our solar supply chain.
