

Communication room and base station

Overview

In the area of wireless computer networking, a base station is a radio receiver/transmitter that serves as the hub of the local wireless network, and may also be the gateway between a wired network and the wireless network. It typically consists of a low-power transmitter and .

What is a base station in telecommunications?

In telecommunications, a base station is a fixed transceiver that is the main communication point for one or more wireless mobile client devices. A base station serves as a central connection point for a wireless device to communicate.

What is a base station in a wireless network?

In the area of wireless computer networking, a base station is a radio receiver/transmitter that serves as the hub of the local wireless network, and may also be the gateway between a wired network and the wireless network. It typically consists of a low-power transmitter and wireless router.

How does a base station communicate with a client device?

Generally, if client devices wanted to communicate to each other, they would communicate both directly with the base station and do so by routing all traffic through it for transmission to another device. Base stations in cellular telephone networks are more commonly referred to as cell towers.

Why are base stations important in cellular communication?

Base stations are important in the cellular communication as it facilitate seamless communication between mobile devices and the network communication. The demand for efficient data transmission are increased as we are advancing towards new technologies such as 5G and other data intensive applications.

Is a base station a transmitter or broadcast point?

Base stations are generally a transceiver, capable of sending and receiving

wireless signals; otherwise, if they only transmitted signals out, they would be considered a transmitter or broadcast point. A base station will have one or more radio frequency (RF) antennas to transmit and receive RF signals to other devices.

What does a base station Radio do?

A dispatcher, for example, may use a base station radio to communicate with workers in the field for emergency services, police, taxi or large work sites. Many consumer systems also employ base stations to fill a role.
