

Does the mopping machine base station need a power supply

Overview

What happens if a base station gets dirty mops?

Best case scenario is that larger debris like hair and bugs get sucked up in the dust bag and dirt and dust from the mops is drained away with the dirty mop water, but the base stations will inevitably collect dirt that needs to be cleaned.

How to prolong the service life of a robot mopping system?

To prolong the service life of the reservoir, it is recommended to use purified water or softened water for the mopping system. Empty the reservoir after Robot finishes mopping.

How to install automatic water exchange system?

Support for your Automatic Water Exchange System Before installing, make sure to turn off the power of base station. After installing, you must first start the water before you restart the power. You must use the wrench in the explosion-proof pipe to tighten it. If you need to cut the water pipe, its end must be flat.

What is the best vacuum without auto refill mopping stations?

So that means for combined vacuuming performance the SwitchBot and Roborock were tied with a total of 77.5% pickup and the Narwal was close behind at 75%, and here's how those rank with other top vacuums without auto refill mopping stations.

How do I clean the reservoir after robot mopping?

Empty the reservoir after Robot finishes mopping. A multi-function Cleaning Tool is provided for easy maintenance. Handle with care, this cleaning tool has sharp edges. Note: yeedi manufactures various replacement parts and fittings. Please contact Customer Service for more information on replacement parts.

How do you connect a water pipe to a base station?

You must use the wrench in the explosion-proof pipe to tighten it. If you need to cut the water pipe, its end must be flat. The adapter must be installed into the back of the base station properly, until there is a "click" sound. When connecting the pipe to the control box, make sure the marks on the pipe disappear.
