

Double-glass bifacial modules

Overview

Should bifacial panels have double/dual glass?

These days, many bifacial panel designs incorporate double/dual glass at the rear of the modules. Glass-glass panels seem to better transmit light and are more resistant to unpredictable weather, moisture, corrosion, and have good mechanical load capacity.

What is a bifacial solar module?

The front of a bifacial solar module is covered with a protective glass and the rear side may be made of either glass or transparent polymer backsheet that allows sunlight to pass through. This stands in contrast to conventional solar panels which have opaque backsheets.

What is a dual glass module?

Our dual glass modules use the same internal circuit connection as a traditional glass-backsheet module but feature heat-strengthened glass on both sides. We produce the back glass with a unique drilling technique that ensures the reliability of both the junction box installation and the module.

What is bifacial glass technology?

Bifacial glass technology is the preferred material among manufacturers for the rear side cover of the modules. Some key advantages of the glass-glass structure are: Glass-glass modules can also be frameless, which helps eliminate the cost of an extruded aluminum frame. However, glass-glass models with frames have a lower risk of breakage.

How do Solardeland bifacial double glass panels work?

This traditional design focuses only on capturing sunlight from the front. Solardeland bifacial double glass panels are designed to capture sunlight from both sides. They are enclosed between two layers of tempered glass, allowing the back to absorb reflected light from the surrounding surfaces.

Do bifacial modules come with frames?

As a result, most glass-glass modules come with frames in place. Compared with standard glass backsheet technology, framed modules with two layers of glass are heavier. Therefore, transparent backsheets are a solution for a lighter bifacial module. A more lightweight module means less cost on transportation, labor, and trackers whenever applicable.

Double-glass bifacial modules

[Bifacial Photovoltaics 2021: Status, Opportunities and Challenges ...](#)

The reason for this is that bifacial solar cells are the result of an evolution of crystalline Si PV cell technology and, at the same time, module producers are increasingly ...

The Difference Between Bifacial Module and Double Glass Bifacial Module

In summary, the primary difference between a bifacial module and a double glass bifacial module is the presence of glass on both sides in the latter, which provides improved ...

[What are the advantages of dual-glass Dualsun modules?](#)

Bifaciality: The bifaciality of double glass modules produces a gain of around 10-11% compared to the power measured on the front panel alone, for TOPCon type modules under so-called BNPI ...

Dual-glass vs glass-backsheet: The winning formula for bifacial modules

Our dual glass modules use the same internal circuit connection as a traditional glass-backsheet module but feature heat-strengthened

glass on both sides. We produce the ...
