

Energy Storage Integration Capacity Building Plan

Overview

How do I deploy an energy storage system?

There are many things that must be considered to successfully deploy an energy storage system. These include: Storage Technology Implications Balance-of-Plant Grid integration Communications and Control Storage Installation The following sections are excerpts from the ESIC Energy Storage Implementation Guide which is free to the public.

Is energy storage capacity expansion possible?

ion, and energy storage capacity expansion is possible. In the run stage, planners will use expanded capacity expansion optimization models and/or tightly coupled iterative processes to coordinate investments across generation.

How to make energy storage bankable?

Stacking of payments is the most common way to make the business model for energy storage bankable whilst optimizing services to the grid. In its simplest version it contains: Let the best technology provide the service(s) the grid needs. Thinking of technology first could do the grid a disservice. I o n e p r o j e c t s ?

I t d e p e n d s .

What are energy storage specific project requirements?

Project Specific Requirements: Elements for developing energy storage specific project requirements include ownership of the storage asset, energy storage system (ESS) performance, communication and control system requirements, site requirements and availability, local constraints, and safety requirements.

What is deployment and integration?

Deployment and Integration describes the stage after procurement contracting has been done until the project has been installed and commissioned, and subsequently handed off to operations. Because energy storage technologies are still emerging, the scope of deployment and integration has not always been fully considered in previous stages.

Who should consider adding energy storage to a commercial building?

This guide is intended for anyone investigating the addition of energy storage to a single or multiple commercial buildings. This could include building energy managers, facility managers, and property managers in a variety of sectors.
