

Energy Storage of China Electric Power Planning and Research Institute

Overview

Is China more suitable for energy storage and demand response?

While related studies have demonstrated the applicability of energy storage and demand response in other countries (Gangopadhyay et al., 2024; Seck et al., 2020), however, China is more suitable for energy storage and demand response deployment due to differences in regional infrastructure, resource endowments and economic development.

How big is China's energy storage capacity?

The most notable finding: by the end of 2024, China had reached 73.76 GW / 168 GWh in cumulative new energy storage capacity—an increase of more than 130% year-on-year. This figure accounts for over 40% of the global total, consolidating China's leading position in the international NES market.

How much energy storage will China have by 2023?

By 2023, an additional 21.5 GW of energy storage had been installed, with over 95% of this capacity being lithium battery-based electrochemical storage (CIAPS, 2024). Several regions in China have already mandated wind and solar power plants to integrate a certain amount of energy storage capacity.

Does Cnesa have a role in China's new energy storage capacity?

CNESA's involvement reflects the report's collaborative yet government-led nature, ensuring data integrity and broad sectoral representation. The most notable finding: by the end of 2024, China had reached 73.76 GW / 168 GWh in cumulative new energy storage capacity—an increase of more than 130% year-on-year.

What is China's energy storage industry?

China is rapidly advancing the development of its energy storage industry. In 2020, the total installed energy storage capacity was only 35.6 GW, with electrochemical storage accounting for 3.27 GW (CNESA, 2021).

What is China electric power research institute (cepri)?

China Electric Power Research Institute (CEPRI), founded in 1951, is a scientific research institute directly affiliated to the State Grid Corporation of China (State Grid). As an internationally renowned scientific research institution, CEPRI tops the list in China's electric power sector in terms of comprehensive strength.

Energy Storage of China Electric Power Planning and Research Institute
