Overview

Can battery energy storage improve frequency modulation of thermal power units?

Li Cuiping et al. used a battery energy storage system to assist in the frequency modulation of thermal power units, significantly improving the frequency modulation effect, smoothing the unit output power and reducing unit wear.

What is dynamic frequency modulation model?

The dynamic frequency modulation model of the whole regional power grid is composed of thermal power units, energy storage systems, nonlinear frequency difference signal decomposition, fire-storage cooperative fuzzy control power distribution, energy storage system output control and other components. Fig. 1.

What is the frequency modulation of hybrid energy storage?

Under the four control strategies of A, B, C and D, the hybrid energy storage participating in the primary frequency modulation of the unit $|\Delta f_m|$ is 0.00194 p.u.Hz, excluding the energy storage system when the frequency modulation $|\Delta f_m|$ is 0.00316 p.u.Hz, compared to a decrease of 37.61 %.

How a thermal power unit coupling energy storage system works?

In this strategy, part of the power commands are assigned to the energy storage system through fuzzy control, so as to establish the primary frequency modulation scheduling module of the thermal power unit coupling energy storage system, which can ensure the power generation revenue of thermal power units.

What is the time scale of frequency modulation?

In the frequency modulation process of power system, the time scale of a frequency modulation adjustment is second level and below, the frequency

fluctuation of the period below 10 s is mainly suppressed by the governor and the inertia of the system, and the time constant of the filter should be <10 s.

How does a hybrid energy storage system affect frequency regulation?

In practice, the frequency fluctuation of a unit is generally caused by continuous and irregular load fluctuations, therefore, simulate the impact of coupling a hybrid energy storage system and a single energy storage system on the primary frequency regulation of thermal power units under continuous disturbances.
