

Energy storage products for Middle East office buildings

Overview

Which energy storage solutions will be the leading energy storage solution in MENA?

Electrochemical storage (batteries) will be the leading energy storage solution in MENA in the short to medium terms, led by sodium-sulfur (NaS) and lithium-ion (Li-Ion) batteries.

What is an energy storage system?

An energy storage system is charged from the grid or by on-site generation to be used at a later time to take advantage of price differentials. Energy storage is used instead of upgrading the transmission network infrastructure. The storage system provides the grid with the necessary output to ensure the voltage level on the network remains steady.

Why do we need energy storage systems?

This necessitates reinforcing the power network, firming capacities, and enhancing the grids' stability and flexibility. Increasing the deployment of intermittent energy sources without integrating energy storage systems may jeopardize the power system stability and security of supply.

How to choose a technology for energy storage?

For energy storage, in addition to the stored electricity, the values accrued from stacked services such as spinning reserves, frequency regulation, and energy arbitrage are major criteria in the selection of technology and its applications.

What is energy storage & how does it work?

Energy storage is used instead of upgrading the transmission network infrastructure. The storage system provides the grid with the necessary output to ensure the voltage level on the network remains steady. Optimizing energy storage systems against wholesale prices—discharging at high prices and

charging at low prices.

How should energy storage be regulated?

Adopt a comprehensive regulatory framework with specific energy storage targets in national energy policies by setting achievable targets and timelines to drive energy storage deployment. Energy and electricity laws and regulations should account for the deployment of energy storage and be amended accordingly.
