

# **Fire rating of double-glass panels**

## Overview

---

What are fire rated glass and glazing products?

Remember the hardware. Fire-rated glass and glazing products are commonly found in doors and entrances, incorporating a range of hardware products. Hardware must be fire-rated and able to fit on the fire-rated frames. This is particularly important when working with narrower fire-rated frames.

Which type of glass is best for fire rated doors?

This type of glass is particularly effective in applications where both fire containment and thermal insulation are required. For instance, laminated glass is frequently used in commercial fire rated glass doors, where its multi-layered construction provides enhanced safety and performance.

What is a fire rated glass test?

Heat soaking: Some fire rated glass undergoes a heat soak test to identify potential impurities, such as nickel sulfide inclusions, that could cause the glass to fail during a fire. The heat soak test subjects the glass to controlled thermal cycles to ensure it won't break under high temperatures.

Why is TGP a fire rated Glass Company?

TGP's fire-rated glazing products allow you to push the boundaries of fire-rated design like never before. It's why we're North America's most specified fire-rated glass company. Create with confidence using our fire-rated glass products.

Can fire rated glass be used in commercial buildings?

The integration of fire rated glass into commercial buildings is a testament to its versatility and effectiveness as a fire safety solution. Commercial fire rated glass doors and partitions are widely used in shopping malls, airports, and office complexes, where the combination of safety, durability, and aesthetics is paramount.

What is fire rated glass used for?

One of the most common uses of fire rated glass is in fire rated doors. These doors are critical in both residential and commercial settings, providing fire compartmentalization while allowing visibility between spaces.
