

Inverter can drive home amplifier

Overview

How to choose a sound system inverter?

Once you know the total power consumption of your sound system, inverter selection becomes easy. You just need to choose a pure sine wave inverter with a power rating greater than the total power consumption. You can safely use the inverter to drive your sound system.

How to choose a rated power inverter?

The power of the inverter (rated power, not peak power) should ideally be twice the total power consumption you calculated. For example, if you calculate that the total power consumption of your audio system is 1000W, then you need an inverter with a rated power of 2000W to drive the entire audio system. So how do we choose the type of inverter?

.

Should you buy a pure sine wave inverter?

The pure sine wave inverter is highly compatible and you can connect the inverter to any system while ensuring that the total power consumption does not exceed the rated power of the inverter. So, in short, if you want to buy an inverter, Junchipower recommends you choose a sine wave inverter for a better sound experience.
