

Iran Flywheel Energy Storage Project

Overview

What is flywheel energy storage FESS technology?

The principle of flywheel energy storage FESS technology originates from aerospace technology. Its working principle is based on the use of electricity as the driving force to drive the flywheel to rotate at a high speed and store electrical energy in the form of mechanical energy.

What makes a flywheel a great energy storage system?

The flywheel is modular and offers unparalleled configurability in terms of power to energy ratio, which makes it the first dynamic energy storage system whose discharge duration can be matched exactly to the customer's needs.

How can flywheels be more competitive to batteries?

The use of new materials and compact designs will increase the specific energy and energy density to make flywheels more competitive to batteries. Other opportunities are new applications in energy harvest, hybrid energy systems, and flywheel's secondary functionality apart from energy storage.

Are flywheel-based hybrid energy storage systems based on compressed air energy storage?

While many papers compare different ESS technologies, only a few research [152,153] studies design and control flywheel-based hybrid energy storage systems. Recently, Zhang et al. present a hybrid energy storage system based on compressed air energy storage and FESS.

How does a flywheel work?

The power system delivers electrical energy to the flywheel device. Discharge: The process converts the mechanical energy consumed by the rotation of the flywheel into electrical energy and transmits it out, the drive motor operates as a generator, and the speed of the flywheel will decrease accordingly.

Can a flywheel energy storage system control frequency regulation after micro-grid islanding?

Arani et al. present the modeling and control of an induction machine-based flywheel energy storage system for frequency regulation after micro-grid islanding. Mir et al. present a nonlinear adaptive intelligent controller for a doubly-fed-induction machine-driven FESS.
