

Mali energy storage project and thermal power

Overview

How a decentralized energy supply works in Mali?

The small size and dispersed locations of villages in Mali for a long time made off-grid decentralized mechanical and electric energy supply the only viable option. A multifunctional platform consists of a 10-hp diesel engine that, as desired, can power a mill, a generator, a pump or other devices mounted on the same rail.

What is the energy strategy of Mali?

The general energy strategy of Mali focuses on the development of local resources such as hydropower and solar energy in order to reduce petroleum imports. Objectives of the National Energy Policy regarding renewable energy are: Promotion of RE.

What is the energy access problem in Mali?

Mali faces a critical energy access challenge. The national power access rate was 50% in 2019 (compared to 36.11% in 2015). The problem is particularly acute in rural areas with 21.12% access rate in 2019 (compared to 15.75% in 2015).

Why is energy du Mali struggling with load shedding?

Power generation is limited (Annex A.17), forcing Energie du Mali (EDM, the power utility) to have recourse to frequent load shedding. EDM's difficulties stem from the discrepancy between the average price (CFAF96 per kWh) and the power production cost (CFAF130 per kWh) in 2019.

How much energy does Mali use?

The remaining 4% of the primary energy supply is largely made up of renewably generated electricity, mainly by hydropower. On the energy consumption side, households consume 86 % of Mali's energy, (road) transport 10 %, industry (mainly mining) 3 % and agriculture 1 % (2003
