

Morocco s electricity generation from monocrystalline photovoltaic panels

Overview

An (IEA) report from July 2023 highlights that in 2020, imported fossil fuels—coal, oil, and gas—accounted for over 80% of Morocco's electricity generation. It outlines that Morocco has developed a plan to transform its energy sector by 2030, aiming to increase the share to 52%, with specific targets of 20% for solar power, 20% for wind energy, and 12% for hydroelectric power. This approach seeks to enhance energy security and reduce.
