Overview

What is a full containment tank for the Mozambique LNG project?

All tanks for the Mozambique LNG Project will follow strict industry standards in terms of total containment. Full containment tanks generally consist of a primary container of 9% nickel steel, known for its excellent strength and durability at cryogenic temperatures.

How does Mozambique LNG project work?

From here the natural gas is piped through a pipeline's grid to the onshore LNG facility. Subsea systems are designed with underwater controls to regulate well flow and provide a safe and reliable means of shutting down. At the onshore installation of the Mozambique LNG Project, natural gas will be received, pre-treated, and liquefied.

Where is natural gas found in Mozambique?

Due to the location of the natural gas discovered in Area 1 offshore Mozambique, which is approximately 40 kilometers from the coast and in water depths of approximately 1,600 meters, it is necessary to use specially designed equipment to produce, collect, process, and transport the natural gas to onshore facilities for processing.

How long does it take to ship LNG from Mozambique?

Travel time from Mozambique to terminals in northern India could take around 7 days, while delivery of LNG cargo to certain Japanese markets could take approximately 17 days. Upon reaching the destination, the LNG is unloaded at the buyer's regasification terminal.
