

Nordic power grid energy storage equipment procurement

Overview

How does the Nordic power system work?

Besides thermal constraints, grid stability and other technical aspects also set limits for how to utilize the grid. A significant and ever-increasing share of generation in the Nordic power system comes from wind and solar power, which connect to the grid using converters.

Does the Nordic power system need a firm connection?

The Nordic power system is already highly utilised, and in many areas, it is not possible to connect new loads or generation with a firm connection without having to reinforce the grid. The grid constraints that hinder firm connection are strongly dependent on local conditions and vary from case to case.

What is the largest energy storage park in the Nordic region?

Romina Pourmokhtari, Sweden's Minister for Climate and Environment, officially inaugurated the largest energy storage park in the Nordic region. The initiative, led by Ingrid Capacity in collaboration with BW ESS, consists of 14 large-scale energy storage systems with a total capacity of 211 MW/211 MWh.

What role does a strong Nordic grid play?

As the share of renewable and fluctuating generation increases, a strong Nordic grid will have a key role in balancing geographical variations in flexible (hydro, nuclear and thermal) and non-flexible (wind and solar) power sources across the region and facilitate efficient use of the power resources.

What is the largest energy capacity in the Nordics?

The largest by megawatt-hours energy capacity in the Nordics will be a 2-hour project in Finland that Neoen recently started building. It has a capacity of 112.9MWh, and that is also set to come online at the start of 2025.

Why do Nordic countries have a strong energy system?

The Nordic countries have a unique and long-standing cooperation in the energy field, and our power system is among one of the most integrated in the world. The sum of our different energy resources and comparative advantages constitutes a diversified and resilient Nordic system and makes our system stronger.
