

# Office Building Energy Storage Solutions

## Overview

---

What is energy storage?

Energy storage is a cornerstone of the sustainable energy future we envision. By integrating advanced storage solutions into buildings, we can enhance energy efficiency, increase the use of renewable energy, and create resilient energy systems.

What is inter-office energy storage?

An inter-office energy storage project in collaboration with the Department of Energy's Vehicle Technologies Office, Building Technologies Office, and Solar Energy Technologies Office to provide foundational science enabling cost-effective pathways for optimized design and operation of hybrid thermal and electrochemical energy storage systems.

Can thermal energy storage be used in buildings?

Through industry partnerships, NREL researchers address technical barriers to deployment and widespread adoption of thermal energy storage in buildings. In the United States, buildings consume approximately 39% of all primary energy and 74% of all electricity.

Why do buildings need energy storage systems?

Energy storage systems enable buildings to manage their energy consumption more dynamically, supporting grid stability and preventing blackouts. Additionally, energy storage enhances building resilience by providing a backup power source during outages, ensuring critical operations continue uninterrupted.

Why is energy storage important?

The capability to store energy allows building operators increased demand flexibility, an essential component of grid-integrated efficient buildings. When you can store energy, you can control the level and timing of when you use

energy or return it to the grid.

Can thermal energy storage be a building decarbonization resource?

NREL is significantly advancing the viability of thermal energy storage (TES) as a building decarbonization resource for a highly renewable energy future. Through industry partnerships, NREL researchers address technical barriers to deployment and widespread adoption of thermal energy storage in buildings.
