

Photovoltaic double-glass modules and monocrystalline panels

Overview

Typically, solar panels have a front glass panel and a back plastic sheet. These single-sided glass panels are supported by frames across the entire construction. Manufacturers have developed double glass solar panels in recent years. Instead of a plastic back sheet, these panels have a second layer of glass.

There is a clear distinction between single and double glass solar panels. This difference should be clear by this- .

The front surface of double glass mono solar cells has an emitter layer and the back side has a dark covering. Passivated Emitter and Rear.
