

Photovoltaic power station in the Bahamas

Overview

Development of the four solar-fueled power systems will set the stage to scale the Family Islands solar program across the island chain's outlying islands, as well as contribute to the Bahamas achieving a national goal of renewable energy resources meeting 30% of electricity needs by 2030.

The Islands Energy Program team hasn't found an instance yet "where importing natural gas, diesel, propane or other fossil fuel for power generation is cheaper.

Three pillars support the program. The first is strategic planning that enables island governments, private and public-sector enterprises to undertake.

Those characteristics led Shell to propose investing very large sums of capital to build out a 220-250-MW natural gas power plant. "It's still early days. There's no.

This ambitious project is set to significantly reduce electricity costs and cut emissions by 25%, with the solar plant expected to be operational by 2025. This development is a vital part of The Bahamas' ongoing efforts to diversify its energy sources and reduce reliance on imported fossil fuels.
