

Power consumption of 5G base stations in cities

Overview

Today we see that a major part of energy consumption in mobile networks comes from the radio base station sites and that the consumption is stable. We can also see that even in densely deployed netw.

How much power does a 5G station use?

The power consumption of a single 5G station is 2.5 to 3.5 times higher than that of a single 4G station. The main factor behind this increase in 5G power consumption is the high power usage of the active antenna unit (AAU). Under a full workload, a single station uses nearly 3700W.

Is 5G more energy efficient than 4G?

Although the absolute value of the power consumption of 5G base stations is increasing, their energy efficiency ratio is much lower than that of 4G stations. In other words, with the same power consumption, the network capacity of 5G will be as dozens of times larger than 4G, so the power consumption per bit is sharply reduced.

Does 5G increase energy consumption?

Although 5G networks offer larger capacity due to more antennas and larger bandwidths, their increased energy consumption is concerning. This paper investigates energy consumption issues from widespread 5G deployment using city-scale real-world mobile network data.

How can we improve the energy efficiency of 5G networks?

To improve the energy efficiency of 5G networks, it is imperative to develop sophisticated models that accurately reflect the influence of base station (BS) attributes and operational conditions on energy usage.

Should power consumption models be used in 5G networks?

This restricts the potential use of the power models, as their validity and accuracy remain unclear. Future work includes the further development of the power consumption models to form a unified evaluation framework that

enables the quantification and optimization of energy consumption and energy efficiency of 5G networks.

Do base stations dominate the energy consumption of the radio access network?

Furthermore, the base stations dominate the energy consumption of the radio access network. Therefore, it is reasonable to focus on the power consumption of the base stations first, while other aspects such as virtualization of compute in the 5G core or the energy consumption of user equipment should be considered at a later stage.

Power consumption of 5G base stations in cities

[Small Cells, Big Impact: Designing Power Solutions for 5G ...](#)

Small cells are smaller and cheaper than a cell tower and can be installed in a variety of areas, bringing more base stations closer to users. A large number of base stations increases the ...

[Final draft of deliverable D.WG3-02-Smart Energy Saving of ...](#)

Change Log This document contains Version 1.0 of the ITU-T Technical Report on "Smart energy saving of 5G base station: Based on AI and other emerging technologies to forecast and ...

[Machine Learning and Analytical Power Consumption Models for 5G Base](#)

The energy consumption of the fifth generation (5G) of mobile networks is one of the major concerns of the telecom industry. However, there is not currently an accurate and tractable ...

[Modelling the 5G Energy Consumption using Real-world Data: ...](#)

This paper proposes a novel 5G base stations energy consumption modelling method by learning from a real-world dataset used in the

ITU 5G Base Station Energy Consumption Modelling ...

[Modelling the 5G Energy Consumption using Real-world ...](#)

To improve the energy efficiency of 5G networks, it is imperative to develop sophisticated models that accurately reflect the influence of base station (BS) attributes and operational conditions ...

[Machine Learning and Analytical Power Consumption Models for 5G Base](#)

The energy consumption of the fifth generation (5G) of mobile networks is one of the major concerns of the telecom industry. However, there is not currently an accurate and ...

Multi-objective cooperative optimization of communication base station

Recently, 5G communication base stations have steadily evolved into a key developing load in the distribution network. During the operation process, scientific dispatching ...

[Comparison of Power Consumption Models for 5G Cellular Network Base](#)

Power consumption models for base stations are briefly discussed as part of the development of a model for life cycle assessment. An overview of relevant base station power ...
