

# **Price of mobile energy storage power supply in Western Europe**

## Overview

---

Recent industry analysis reveals that lithium-ion battery storage systems now average €300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2030. How much does battery storage cost in Europe?

The landscape of utility-scale battery storage costs in Europe continues to evolve rapidly, driven by technological advancements and increasing demand for renewable energy integration. As we've explored, the current costs range from €250 to €400 per kWh, with a clear downward trajectory expected in the coming years.

Which energy storage technology is the most popular in Europe?

Pumped hydro is the most widely used technology for energy storage in Europe and worldwide, but batteries and hydrogen have come into the spotlight over the last decade as a recent trend in the energy storage market.

What is the future of energy storage in Ireland?

Future market potential is concentrated in pre-sheet energy storage and energy storage co-located projects, residential and commercial storage market space is not large. Ireland's battery storage capacity is expected to grow from 792 MW in 2023 to 3.9 GW in 2030, mainly in the pre-table storage market.

Is Poland the future of energy storage?

Poland is one of the emerging energy storage markets in Europe, with an installed capacity of 44 MW in 2023 and expected to reach 4.6 GW in 2030, and pre-table energy storage is its main development direction.

Which country is promoting the development of residential energy storage?

In terms of residential energy storage, the Polish government has launched Moj PRD 5.0 subsidy program to encourage the development of residential

energy storage. Sweden's installed battery storage capacity is expected to grow from 503 MW in 2023 to 3.8 GW in 2030, with high revenue levels in the ancillary services market driving the market growth.

What percentage of Europe's energy storage capacity is pumped hydro?

However, despite an exponential growth in Europe's battery energy storage capacity, which reached 36 gigawatt-hours in 2023, pumped hydro still accounted for 90 percent of the electricity storage capacity in the European Union that year.

## Price of mobile energy storage power supply in Western Europe
