

Price of original Japanese container batteries

Overview

How batteries are recycled in Japan?

A common feature was that a large portion of batteries was still in use, stored at home or industry and collection and recycling or proper management is desired. Considering collected Li-ion batteries in Japan, they are recycled at some domestic recycling facilities. They are treated with heat, and mix metal of Co, Fe, Al and Cu is recovered now.

What is the collection rate of used batteries in Japan?

The collection rate for used Li-ion batteries was about 10% during this period. 70% or more of the small batteries are not removed from used electronic products. Batteries sometimes contain precious or toxic substances (e.g. nickel, cobalt, lead, mercury, cadmium). However, the collection and recycling rate of small batteries were low in Japan.

What are the requirements for importing lithium batteries?

Batteries must be installed in or built-in to the equipment. The capacity of the lithium battery or watt-hour rated value, etc. must be within certain limitations. 2 units in case of assembled battery). (4) The mail must be addressed to countries/territories without restrictions on importing lithium batteries.
