

Rooftop solar photovoltaic inverter

Overview

Inverters are incredibly important pieces of equipment in a rooftop solar system. There are three options available: string inverters, microinverters, and power optimizers.

Solar energy doesn't provide electricity in a format that your table lamp could be powered by. Inverters change the power produced by your solar panels into something you can.

To recap, there are three kinds of inverters: string inverters, microinverters, and power optimizers. They all transform the power your solar.
