

Solar Burst System

Overview

They are basically bursts of radio waves that can tell us a lot about what is happening in the Sun's atmosphere. Think of them like a cosmic "hello" from our nearest star. Among these bursts are two main types: Type III and Type V.

Solar Burst System

[Beyond the aurorae: How solar flares spill out across the Solar System](#)

Our Sun is currently heading towards, or has already reached, its solar maximum - the point in an 11-year cycle where it is most active. This means the Sun produces more ...
