

Solar power supply system in Norway

Overview

What can Norway do with solar energy?

In Norway, production of solar energy can offload the tapping of water reservoirs. Smart grids and digitization: Most Norwegian households will soon be equipped with smart meters. Smart grids make it easier to coordinate storage and consumption of energy.

How many solar power plants are there in Norway?

In 2023, most of the solar power in Norway is installed on the roofs of households and industry, and primarily cover their own consumption. As of 31 March 2023, there are no dedicated solar power plants in Norway. During 2022, approximately 153 MW of new solar power was installed in Norway.

How will solar energy impact Norway?

Together with wind, solar energy will account for most of the replacement of fossil fuels. Norway is closely linked to the European energy market. Regardless of the growth of solar in Norway, the development in the EU will have consequences for Norwegians.

Is solar power a viable option in Norway?

Norwegian hydropower is currently so cheap that power companies do not consider it attractive to build solar power plants in Norway. In recent years, however, companies have started selling or leasing solar systems to private customers and businesses in Norway. Despite the low energy prices, solar power is growing rapidly in Norway.

Is Norway a good place to buy solar cells?

This passion for nature has made Norway one of the most attractive markets for solar cells. Although some of the appeal of cabin life is to take a time-out from technology, electricity is still needed to power lamps, radios and, now, mobile phone chargers.

How do power plants in Norway work?

Many power plants in Norway have storage reservoirs and production can therefore be adjusted within the constraints set by the licence and the watercourse itself. Wind and solar power are intermittent; electricity can only be generated when the energy is available.
