

Spanish energy storage battery price

Overview

What is Spain's battery storage market?

Spain's battery storage market is dominated by customer-sited systems. Utility-scale storage remains nascent. Currently, Spain's storage market is mainly composed of small-scale batteries co-located with solar PV. Spain's household electricity prices now stand at over EUR 0.30/kWh on average.

Why do we need battery energy storage systems in Spain?

Due to the large capacity of installed hydroelectric and thermal storage systems and the resilience of the Spanish power grid, the need for Battery Energy Storage Systems (BESS) in Spain has been relatively low. The lack of a clear regulatory framework for BESS has also hindered its development in Spain so far.

Can battery storage systems be retrofitted in Spain?

The first solution is battery storage systems that enable peak shift, i.e. feeding electricity into the grid at times when the wholesale price is higher, usually before and after sunset. Fortunately, the retrofitting of battery storage systems in Spain is unproblematic from a regulatory perspective.

How much energy storage capacity does Spain have?

When it comes to installed energy storage capacity in general, Spain is one of the leading countries within Europe (see figure 2). Currently, Spain has 6.3GW of hydroelectric and 1GW of thermal storage capacity installed. In fact, the non-BESS storage capacity in Spain is higher than in any other European country.

Does Spain have a storage market?

Currently, Spain's storage market is mainly composed of small-scale batteries co-located with solar PV. Spain's household electricity prices now stand at over EUR 0.30/kWh on average. In addition, Spain's reliance on fossil gas has

increased price volatility in recent years.^{16,17,18,19}.

Can batteries access the balancing market in Spain?

Balancing markets are another key source of battery revenue, but regulatory reform is required for batteries to access the Spanish balancing market. This is likely to happen relatively quickly but creates uncertainty around the level of balancing revenues.
