

Tianda photovoltaic module price

Overview

Are photovoltaic module prices stagnating?

While module prices for non-EU projects are in the lower 40 eurocent range, prices within the European Union are stagnating just above the 50 eurocent mark.

Will a photovoltaic module price increase by 10 cent/WP?

Recent investigations have confirmed the end of photovoltaic module price declines. This would lead to a price increase for end products 'Made in Europe' by at least 10 Cent/Wp. Read the full entry in the April edition of pv magazine, due out on April 4.

Why were PV module prices reduced in December?

In December, PV manufacturers had to grant further price reductions for all types of modules and every region of origin. Existing stocks were apparently not reduced as quickly as they had hoped, leading to the price decline.

Can a PV system be financed from China?

At the moment, financing is nearly impossible due to the uncertainty of punitive tariff duties on Chinese modules. Manufacturers from China transfer the import risk to the buyer by having them handle the module import.

Are photovoltaic modules going up in Europe?

In Europe, the price increase for photovoltaic modules is not quite as strong as expected, at least until now. In particular, thin film module prices remained relatively stable, with March showing barely any movement.

Are photovoltaic module prices decreasing?

Recent investigations confirm that the end of photovoltaic module price declines was apparent within the last few months. While the average price

level was still slightly decreasing at the start of 2013, compared to December 2012, a trend reversal was already visible at the end of January.
