

User-side liquid-cooled energy storage project system solution

Overview

What is a liquid cooling thermal management system?

The liquid cooling thermal management system for the energy storage cabin includes liquid cooling units, liquid cooling pipes, and coolant. The unit achieves cooling or heating of the coolant through thermal exchange. The coolant transports heat via thermal exchange with the cooling plates and the liquid cooling units.

What is a liquid cooling system?

This project's liquid cooling system consists of primary, secondary, and tertiary pipelines, constructed by using factory prefabrication and on-site assembly within the cabin. The primary liquid cooling pipes utilize 304 stainless steel, whereas the secondary and tertiary pipes are made from PA12 nylon tubing.

What is a liquid cooling unit?

The product installs a liquid-cooling unit for thermal management of energy storage battery system. It effectively dissipates excess heat in high-temperature environments while in low temperatures, it preheats the equipment. Such measures ensure that the equipment within the cabin maintains its lifespan.

Can a liquid cooled energy storage system eliminate battery inconsistency?

New liquid-cooled energy storage system mitigates battery inconsistency with advanced cooling technology but cannot eliminate it. As a result, the energy storage system is equipped with some control systems including a battery management system (BMS) and power conversion system (PCS) to ensure battery balancing.

How does a liquid cooling unit work?

3.12.1.3 The design of the liquid cooling unit must align with the cabin

structure, adequately addressing dust prevention needed in the operating environment. The liquid cooling pipeline operates in a closed loop. The coolant, propelled by a pump, circulates through the cold plate, exchanging heat with the batteries, which raises its temperature.

How to choose an energy storage unit?

The choice of the unit should be based on the cooling and heating capacity parameters of the energy storage cabin, alongside considerations like installation, cost, and additional functionalities. 3.12.1.2 The unit must utilize a closed, circulating liquid cooling system.
